

KnightVerse

Official Whitepaper • Binance Smart Chain (BNB)

1. Introduction & Vision

KnightVerse is a next-generation, 2D turn-based Play-to-Earn (P2E) RPG built on the Binance Smart Chain (BNB). Merging a two-decade legacy of MMORPG faction mechanics (Karus vs. Human) with a sustainable Web3 economy, KnightVerse eliminates the fatal flaws of traditional P2E models. By integrating Real Yield mechanics through a B2B E-Pin marketplace and establishing robust deflationary token sinks, KnightVerse delivers a truly scalable, player-centric ecosystem.

2. Core Gameplay & Energy Mechanics

The ecosystem is designed to respect the player's time while strictly controlling token emission.

- **Daily Stamina:** To prevent endless grinding and bot-driven inflation, each NFT character is limited to 3 battles per day.
- **Zero-Penalty Loss System:** Fostering a healthy growth environment, losing a battle does not destroy items or deduct tokens. The player simply consumes 1 stamina and receives reduced Experience Points (XP).
- **Logarithmic Progression (Token Sink):** Characters can reach a maximum of Level 59. Leveling up strictly requires burning \$KNIGHT tokens. To counter inflationary rewards at higher levels, the level-up cost scales logarithmically (e.g., Level 1 requires 100 \$KNIGHT; Level 40 requires 2,500 \$KNIGHT). All costs are fixed in \$KNIGHT (No-Oracle Policy).

3. Combat Modes & Algorithmic Matchmaking

- **Solo Arena (1v1):** Entry-level PvE combat. Rewards are dynamically generated based on character rarity and win rate.
- **Tactical Squad (3v3 Arena):** Players deploy 3 characters of the exact same rarity. Grants a +30% Synergy Bonus to the baseline reward pool, incentivizing secondary market volume.
- **World Raids (PvE):** Elite characters (Level 25, 40, 55 thresholds) challenge World Bosses in 1v1 combat, offering a 2x reward multiplier and exclusive NFT item drops.
- **Fair-Play (Anti-P2W):** Algorithmic matchmaking pairs players strictly based on NFT rarity and power levels, protecting low-budget players from high-net-worth "whales."

4. NFT Rarity & Progression Retention

Characters are categorized into 4 tiers: Common, Rare, Epic, and Legendary. Rarity directly dictates the RNG-based reward pool limits per victory.

- **Value Retention:** When a leveled character is traded on a secondary market (e.g., OpenSea), it retains its exact Level and XP, exponentially increasing floor prices.
- **Un-socketing Economy:** NFT weapons and armors can be detached and sold independently, requiring a \$KNIGHT token fee that acts as an additional deflationary sink.

5. Tokenomics, Taxation & The Rolling Time-Lock Treasury

KnightVerse utilizes a zero-burn, cyclic Treasury system governed by smart contracts:

- **Withdrawal Tax (5%):** Extracting \$KNIGHT from the game to a Web3 wallet incurs a 5% tax.
- **DEX Swap Tax (2%):** Trading \$KNIGHT on decentralized exchanges incurs a 2% tax to protect liquidity.
- **Rolling Time-Lock:** Taxes and in-game sinks are deposited into the Protocol Treasury and mathematically locked for 3 months, then strategically deployed for buybacks or subsidies.

6. Real Yield: The E-Pin Infrastructure & B2B Partnerships

KnightVerse bridges Web3 liquidity with the massive Web2 traditional gaming market through a proprietary secondary marketplace selling E-Pins (digital currency for traditional games).

- **Stake-to-Discount:** Staking \$KNIGHT grants access to purchase Real-World E-Pins at a discounted rate (e.g., 5%).
- **Strategic B2B Scaling:** Leveraging founding team background, KnightVerse secures E-Pins at wholesale rates via direct CEO-level partnerships, operating at zero profit margin to pass value directly to stakers.

7. Sustainable Macro-Economy (The "Death Spiral" Solution)

PvP Wager Rake Mechanism: In competitive PvP, matched players wager equal amounts of \$KNIGHT. The protocol automatically deducts a 10% Rake Fee from the total pool before distributing the rest to the victor, removing millions of tokens from circulation daily.

8. Seamless Access: Web2 Onboarding & Social Login

- **One-Time Account Linking:** Players register via Twitter (X) and sign a one-time gas-free signature connecting their Web3 wallet containing the Genesis NFT.
- **Mobile Freedom:** Play directly from any mobile browser via Twitter login without needing a wallet app. Smart contract Webhooks monitor ownership; if the NFT is transferred, Twitter access is instantly suspended.
- **Secure Withdrawals:** In-game earnings are manually withdrawn to the linked Web3 wallet.

9. Security, Anti-Bot & Whale Policy

- **No Free-to-Play:** Entry requires a Genesis NFT (1 - 5 USDT), attracting genuine players while creating an insurmountable cost barrier for bot farms.
- **No Scholarship Program:** Prevents whales from dominating the economy via rental automation.
- **The Whale Flywheel:** Multi-wallet investors trigger 5% Withdrawal and 2% Swap taxes, turning them into liquidity providers.
- **Permanent LP Lock & Audits:** Smart contracts undergo rigorous audits, and DEX Liquidity Pool will be locked permanently prior to Mainnet TGE.

10. Genesis Mint & Vesting Schedule

- **Blind Box Minting:** Genesis NFT purchases feature a 3-day reveal period.
- **Airdrop Criteria:** Airdrops require active participation in the Testnet Demo using the Genesis NFT.
- **Vesting:** Airdrop rewards unlock 40% at TGE, with the remaining 60% distributed linearly over 12 months.

11. Tokenomics & Distribution (\$KNIGHT)

The \$KNIGHT token economy is meticulously designed for long-term sustainability, ensuring a strictly controlled circulating supply.

11.1. Token Specifications

- **Token Name:** KnightVerse | **Ticker:** \$KNIGHT
- **Network:** Binance Smart Chain (BNB / BEP-20)
- **Maximum Total Supply:** 100,000,000 \$KNIGHT (Hard-Capped)

11.2. Allocation Breakdown

40% P2E & Staking Rewards • **20%** Protocol Treasury • **15%** Genesis Presale • **10%** DEX Liquidity (Locked) • **10%** Team & Advisors • **5%** Airdrop & InfoFi

11.3. Comprehensive Vesting Schedule

Allocation Category	%	Amount	TGE	Vesting & Lock Terms
P2E & Staking	40%	40M	0%	Emitted based on active gameplay and staking mechanisms.
Protocol Treasury	20%	20M	5%	3-Month Cliff, followed by 24-month linear vesting.
Presale & Public	15%	15M	20%	20% at TGE, followed by 4-month linear vesting.
DEX Liquidity	10%	10M	100%	Permanently Locked (Lifetime). Anti-rug protection.
Team & Advisors	10%	10M	0%	12-Month Hard Cliff , then 24-month linear vesting.
Airdrop & InfoFi	5%	5M	40%	40% at TGE for testnet users; 60% vests over 12 months.

11.4. The Deflationary Feedback Loop

Taxes (5% Withdrawal, 2% Swap), level-up token burns, and the 10% PvP Wager Rake continually remove \$KNIGHT from active circulation, guaranteeing that the 100M supply remains deflationary over time.
